

# HOUSING NOW

## Winnipeg CMA

Canada Mortgage and Housing Corporation

Date Released: October 2007

### New Home Market

#### Starts surge ahead in September

At the three quarter pole of the 2007 calendar year, housing starts in the Winnipeg Census Metropolitan Area have moved further ahead of those recorded in the first nine months of 2006. Driven primarily by a very strong third quarter in multi-

family starts, the Capital Region saw 2,657 foundations poured from January to September of 2007, up 36 per cent from the same period in 2006. That level of activity has not been seen in Winnipeg since 1988 when 3,342 starts were recorded in the first nine months of the year. While the multi-family sector has been largely responsible for the increased activity, single-detached homes have also moved smartly ahead of last year's pace.

Figure 2

Single-detached starts continued to roll along in September. The Capital region saw foundations poured for 174 homes in September, bringing to 1,425 the number of starts thus far in 2007. This is seven per cent ahead of 2006 when 1,333 starts were recorded through the first nine months of 2006. While the year-over-year increase is marginal, it still represents the strongest first nine months since 1990 which saw 1,629 starts recorded. It is also the third consecutive year with more than 1,250 single-detached starts, indicating a broad base of support for this level of construction.

The long awaited Waverly West development will have its first building permits issued in the fall and will begin to relieve some of the pent up demand in the city's southwest. With the scarcity of available lots in Lindenwoods, Whyte Ridge and Linden Ridge, the land component of the price of a new home in that area of the city has a considerable rise in the last two years. While the project will come on stream too late in the year to have much effect in 2007, 2008 should see some moderation in

the growth of land prices.

Multi-family starts, which have accounted for the lion's share of the year-over-year growth in total housing starts, had a very strong quarter, recording 432 starts over the period including 148 in September. That brought the year-to-date total to 1,232 multi-family starts, a full 99 per cent ahead of the first three quarters of 2006. From a historical perspective, that represents levels of construction not seen since 1988 when 1,315 multi-family units were started in the first nine months of the year. Despite the high level of construction, broad based demand for these units has more than matched the increase in supply as there were only 51 multi-family units in inventory at the end of September, a full 43 per cent lower than in September of 2006.

Communities around Southern Manitoba have also enjoyed substantial increases in starts activity in 2007, with all of the CA's outside of Winnipeg recording significant gains over the first nine months of 2006.

Driven largely by single-detached activity, Brandon, Portage, Thompson, St. Andrews, and Hanover have all seen double digit percentage increases in housing starts over the same period in 2006.

## Resale Market

### Resale market shows no signs of letup

The resale market has continued its torrid summer pace into the fall. The typical easing in the pace of sales has not materialized as the 1,000 unit level was eclipsed again in September. That marked the seventh consecutive month with more than 1,000 sales. Another indicator of the tightness in the resale market is the Sales-To-Active-Listings ratio (SALR). It stood above 100 per cent for the sixth straight month in September, indicating about one month of supply in the resale market. A more balanced situation might see between three and four months of supply. With demand outpacing supply by a fairly wide margin, the upward pressure on prices has been significant. With the pace of sales and price growth continuing briskly, dollar volumes are up accordingly. Winnipeg has seen 1.5 billion dollars of MLS activity thus far in 2007.

Figure 3

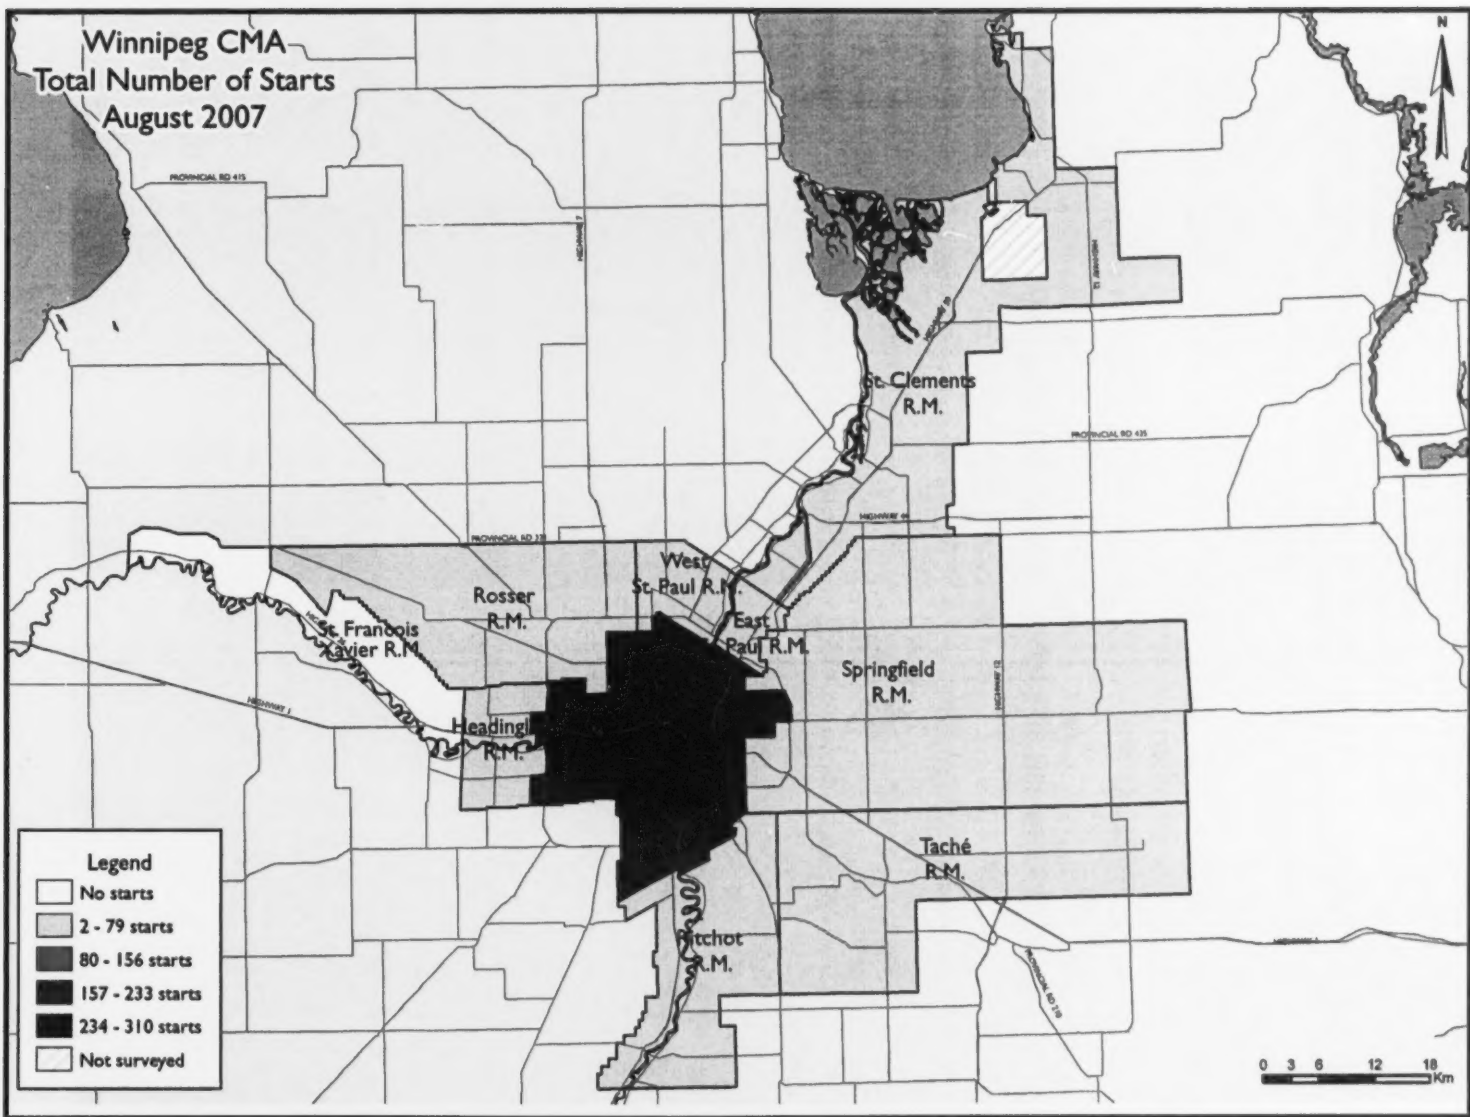

## Economy

### Economic and Demographic trends support high levels of activity

While Manitoba, and particularly the Capital, has long enjoyed significant net international in-migration, that advantage has grown significantly over the last few quarters. In the second quarter of 2007, the net international migration to the province was 2,952, the highest quarterly number on record. Despite this, the unemployment rate in Manitoba continues to be at multi decade lows, reaching 4.4 per cent in September. This comes even as Manitoba is

enjoying substantial population growth and a participation rate, at 69 per cent, that is two points higher than the national average. This suggests that people moving to Manitoba are finding work and not adding to the ranks of the unemployed. The expansion of the labour force has also helped drive GDP growth to one of the highest in the country. The province is on track for its fourth consecutive year of growth in excess of 2.5 per cent. Limits to growth come, as with most of the Western provinces, with the availability of skilled labour. With a number of major capital projects underway and on the horizon, however, unemployment, especially in the construction sector, looks to remain low.

## HOUSING NOW REPORT TABLES

### Available in ALL reports:

- 1 Housing Activity Summary of CMA
- 2 Starts by Submarket and by Dwelling Type – Current Month or Quarter
- 2.1 Starts by Submarket and by Dwelling Type – Year-to-Date

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2001 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four

times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a

## DWELLING TYPES:

A **"Single-Detached"** dwelling (also referred to as **"Single"**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **"Semi-Detached (Double)"** dwelling (also referred to as **"Semi"**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **"Row (Townhouse)"** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **"Apartment and other"** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The **"intended market"** is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **"Rural"** area, for the purposes of this publication, is a centre with a population less than 10,000.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
